## 1 Overview

<b>Name of the programme</b>	Global Foresight and Technology Management
<b>Study type &amp; degree</b>	Consecutive Master of Science (full time)
<b>First start date</b>	WS 21/22; Start in every semester
<b>Standard period of study</b>	3 semesters (90 ECTS, 48 SWS)
<b>Study location</b>	THI-Campus in Ingolstadt
<b>Language of instruction</b>	English
<b>Cooperation</b>	None
<b>Admission requirement</b>	<ul style="list-style-type: none"> <li>- Bachelor's degree at a German university with at least 210 ECTS credit points or an equivalent degree of a foreign university</li> <li>- Foreign applicants must submit their Bachelor's degree to uni-assist which verifies their eligibility and converts their grades to the German grade system. For detailed information see: <a href="https://www.thi.de/en/studies/application/masterapplication-from-abroad/">https://www.thi.de/en/studies/application/masterapplication-from-abroad/</a></li> <li>- Proof of English proficiency level B2 or higher (approved tests); compare: <a href="https://www.thi.de/en/university/university-profile/university-management/legal-department/general-statutes/">https://www.thi.de/en/university/university-profile/university-management/legal-department/general-statutes/</a></li> </ul>
<b>Capacity</b>	60 students p.a. (in one winter- and one summer-group)
<b>Programme director</b>	<p>Prof. Dr.-Ing. Schönmann, Alexander</p> <p>E-Mail: <a href="mailto:alexander.schoenmann@thi.de">alexander.schoenmann@thi.de</a></p> <p>Phone: +49 (0) 841 / 9348-3509</p>

## 2 Introduction

The text describes the current state of the programme modules in the Master's degree "Global Foresight and Technology Management" according to the "Study Regulation" (German: "Studien- und Prüfungsordnung") as of 22/02/2021.

Especially the "Programme and Course Description" gives the objectives and content of the individual compulsory modules and the breakdown of SWS (semester hours per week) per module and semester.

In case of doubt, the higher-ranking "Study Regulation" (German: "Studien- und Prüfungsordnung") has priority.

The following link leads to the "Study Regulation" (German: "Studien- und Prüfungsordnung"):

<https://www.thi.de/en/university/university-profile/hochschulorganisation/legal-department/statutes-for-the-faculty-of-engineering-and-management/master-programmes-wi/statutes-master-global-foresight-technology-management/>

## 2.1 Objectives

Due to the current dynamic changes in economy, technology and society the necessity of future skills increases significantly. Hence, the needed qualifications are on the one hand foresight research, development of strategies, innovation, business development and change management and on the other hand, skills to control these changes like corporate responsibility, technology assessment and business ethics.

The international Master's degree „Global Foresight and Technology Management“ with its unique position is the perfect answer to this requirement. The programme is fully taught in English and welcomes both German and international students. It is designed as an interdisciplinary programme at the interface of technology, economy and sociology with a strong focus on foresight.

## 2.2 Admission requirements

- Proof of Bachelor's degree in engineering sciences, engineering and management, IT, natural sciences, economics, sociology and business administration or a degree in another related discipline at a German university with at least 210 ECTS credit points or an equivalent degree of a foreign university.
- All foreign applicants must submit their Bachelor's degree to uni-assist, which verifies their eligibility and converts their grades to the German grade system. Uni-Assist will issue a so-called preliminary inspection documentation (VPD) which you must upload to the application portal (like their other documents).

For detailed information see: <https://www.thi.de/en/studies/application/masterapplication-from-abroad/>

- Proof of English proficiency level B2 or higher (approved tests); compare: <https://www.thi.de/en/university/university-profile/university-management/legal-department/general-statutes/>

The binding regulations for this curriculum can be found in:

- "Studien- und Prüfungsordnung (SPO)" for the Master's degree "Global Foresight and Technology Management" as of 22/02/2021  
<https://www.thi.de/en/university/university-profile/hochschulorganisation/legal-department/statutes-for-the-faculty-of-engineering-and-management/master-programmes-wi/statutes-master-global-foresight-technology-management/>
- Rahmenprüfungsordnung" (RaPO) [State Examination Regulations] of Technische Hochschule Ingolstadt
- "Allgemeine Prüfungsordnung" (APO) [University Examination Regulations] of Technische Hochschule Ingolstadt
- "Immatrikulationssatzung" [University Enrollment Statutes] of Technische Hochschule Ingolstadt

The three statutes/regulations can be found at the following link:

<https://www.thi.de/en/university/university-profile/university-management/legal-department/general-statutes/>

The sequence of studies is influenced by the regulations of "Studien- und Prüfungsordnung (SPO)".

## 2.3 Target group

The programme addresses to:

- graduates of Bachelor programmes or young professionals with a Bachelor's degree in engineering sciences, engineering and management, IT, natural sciences, economics, sociology and business administration or a degree in another related discipline
- prospective students with interest in interdisciplinary studies at the interface of technology, economy, and sociology with a strong focus on the current state of foresight research and challenges of the future
- prospective students that prefer a Master's programme fully taught in English, like to gain intercultural experience, and go for an international career at home and abroad.

## 2.4 Structure of the programme

The programme lasts three semesters. The first semester contains three theoretical courses in combination with two practical project studies to enhance the learning progress. The second semester has the same structure. The Master's thesis is placed in the third semester.

The following table shows the curriculum:

### 1. Semester

- Strategic Foresight and Trend Analysis
- Innovation Management Methods
- Technology Design and Evaluation
- Project Future Life Worlds
- Project Technology Application

### 2. Semester

- Future Business Modelling
- Transformation Processes and Change Management
- Technology Assessment and Business Ethics
- Project Business Scenarios and Risk Management
- Project Research Seminar

### 3. Semester

- Master's Thesis

## 2.5 Prerequisites for advancement

To get the title of Master's thesis requires that at least 30 ECTS be achieved in the sequence of study (compare "Studien- und Prüfungsordnung" as of 22/02/2021).

### 3 Qualification profile

The programme is fully taught in English and welcomes both German and international students. It is designed as an interdisciplinary programme at the interface of technology, economy and sociology with a strong focus on foresight.

Five clusters offer a maximum of interdisciplinarity:

- Cluster foresight
- Cluster technology
- Cluster economics
- Cluster social aspects
- Cluster integrative

The graduates can apply foresight methods, manage innovation processes, apply technology trends and assess them regarding the environment and society, form business models and evaluate trend scenarios.

The graduates can compile complex tasks within cross-functional and international teams, speak English fluently, work target-oriented and are able to present results.

### 3.1 Mission statement

The Master's programme integrates the mission statement in the following ways:

*We prepare our students for the challenges of the future:*

- The Master's programme creates future competence.
- It creates a spirit of innovation and teaches entrepreneurial thinking.
- It is an interdisciplinary programme, which enables students to develop future-oriented solutions for interdisciplinary challenges.
- It qualifies students to help shape social changes such as the digital transformation and technological change. It sensitizes students to the sustainable use of the environment and resources, to socially responsible behavior and to social commitment.

*We enable our students to develop solutions to problems based on scientific knowledge:*

- The Master's programme includes a lot of project work. This enables students to acquire applicable problem-solving skills.
- The lecturers transfer their practical experience and teach academic knowledge. They are professionally competent, are constantly developing in their areas of expertise and contribute their research experience (four research professorships) to teaching.
- Students acquire professional, methodical, social- and self-competences.

*We open outstanding regional and international perspectives for our students:*

- The Master's programme is fully taught in English, addresses international students and creates intercultural competences.
- In this way, the programme contributes to a cosmopolitan, international campus.
- Our numerous cooperations with companies in the region enable our students to start their careers in the best possible way, both regionally and internationally.

*We teach and learn through personal exchange:*

- Because this is a Master's programme, small groups and seminar-based forms of teaching are set to enable individual exchange with the students.
- The teaching concept offers digitalized courses (e. g. inverted classroom) in combination with many practical project studies to enhance the learning progress.
- The lecturers try out new ways of innovative and experimental teaching. For example, the first half of the semester concentrates on theoretical basics, the second half on practical application.

*We help all students discover and realize their individual potential:*

- The Master's programme includes a lot of project work. In joint project work, our students gain social skills such as the ability to cooperate and deal with conflict, and leadership skills.
- The Master's programme is international and intercultural. Hence, the programme promotes performance in an appreciative cooperation. We meet each other with tolerance and openness and understand diversity as an opportunity to learn from each other and develop further.

## 3.2 Study objectives

### 3.2.1 Subject-specific competences of the study programme

#### Professional competences

The graduates:

- can analyze trends and derive future developments
- are familiar with modern technologies and can develop, evaluate, use and market modern technologies for specific applications
- can develop forward-looking business models and evaluate them with business plans, calculate the advantages of different scenarios and have a basic understanding of the significance and opportunities of entrepreneurship
- can identify the opportunities and risks of operational and social transformation processes and know the success factors and the roles of stakeholders in change management projects

### 3.2.2 Interdisciplinary competences of the study programme

#### Methodical competences

The graduates are able to:

- work scientifically
- plan, compile and lead projects
- apply methods of foresight and methods of des innovation and technology management. To develop business models methodically, to evaluate business scenarios, to apply methods of change management, risk management and technology assessment
- analyze interdisciplinary problems, to recognize comprehensive correlations, to transfer learned competences to new tasks and to evaluate the technical, economic and social impact of compiled solutions

#### Social competences

The graduates are able to:

- compile complex tasks in cross-functional and international teams, to solve conflicts in teams and to lead teams
- speak English fluently (incl. technical terms) and to react sensitively in intercultural affairs
- communicate their competences and to communicate generally
- convince and to become accepted

#### Personal competences

The graduates are able to:

- organize themselves and to manage their time
- have analytical and outcome-oriented intellectual power
- work target-oriented and autonomously

- present results and themselves

### 3.2.3 Examination concept of the study programme

The focus of the selection of examination forms is on the best possible assessment of the achievement of the set learning objectives - accordingly, there is a variety of different examination forms ranging from oral and written examinations, project work and study papers as well as presentations.

Projects are a focus in the programme. In the projects, students learn to put theoretical knowledge into practice and to deepen it in a team. The examination form "project" is a group work to which each student must contribute individually and whose results are presented orally or in writing.

An overview of the examination concept is given below.

Module	Examination
Strategic Foresight and Trend Analysis Innovation Management Methods Technology Design and Evaluation Project Future Life Worlds Project Technology Application	mdIP schrP schrP Proj. Proj.
Future Business Modelling Transformation Processes and Change Management Technology Assessment and Business Ethics Project Business Scenarios and Risk Management Project Research Seminar	schrP StA SA mit Koll. Proj. Proj.
Master's Thesis	MA

For the form of examinations, please compare "Studien- und Prüfungsordnung", Appendix 1. Link:

<https://www.thi.de/en/university/university-profile/hochschulorganisation/legal-department/statutes-for-the-faculty-of-engineering-and-management/master-programmes-wi/statutes-master-global-foresight-technology-management/>

### 3.2.4 Application of the study programme

Generally, all teachers have a long-standing background in the industry and/or an above-average academic qualification.

The THI founded an institute for foresight and technology research (Bavarian Foresight Institute). The institute is equipped with four research professorships. The institute creates a close link between teaching and research.

Experts from the industry review the concept of the master's programme "Global Foresight and Technology Management".

During the first two semesters, three theoretical courses are taught in combination with two practical project studies to enhance the learning progress. Theoretical content is also explained in the theory modules using practical examples.

### 3.2.5 Contribution of individual modules to objectives of the programme

Module	Profess. Comp.	Method. Comp.	Social Comp.	Personal Comp.
Strategic Foresight and Trend Analysis	++	++	0	0
Innovation Management Methods	++	++	0	+
Technology Design and Evaluation	++	+	0	+
Project Future Life Worlds	+	+	++	+
Project Technology Application	+	+	++	+
Future Business Modelling	++	++	0	+
Transformation Processes and Change Management	++	++	0	0
Technology Assessment and Business Ethics	++	+	0	0
Project Business Scenarios and Risk Management	+	+	++	+
Project Research Seminar	+	+	++	++
Master's Thesis	+	++	++	++

### 3.3 Possible professional fields

There is a wide field of application in specialist or management roles in national or international companies and organizations.

Graduates are especially well prepared to take on specialist and management roles in the following areas:

- Project Management
- Product and Technology Management
- Customer-Technology-Competitor Foresight and Establishing Future Skills
- Creativity and Innovation Management
- Business Development/ Development of Trendsetting Business Models
- Entrepreneurship
- Sustainability

Graduates are also particularly well qualified for these tasks in an international context. Typical industries for the graduates of this programme are:

- Mechanical and Electrical Engineering
- IT
- Mobility Industry
- Services
- Consultancy
- Education
- Cities and Communities

## 4 Description of Modules

## 4.1 Compulsory Modules

<b>Strategic Foresight and Trend Analysis</b>			
<b>Module abbreviation:</b>	StratFor_M-GFT	<b>SPO-No.:</b>	1
<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Global Foresight and Technology Management (SPO WS 21/22)	Compulsory module	1
<b>Module attributes:</b>	<b>Language of instruction</b>	<b>Duration of module</b>	<b>Frequency of offer</b>
	English	1 semester	winter and summer term
<b>Responsible for module:</b>	Schwarz, Jan Oliver		
<b>Lecturers:</b>	Schwarz, Jan Oliver		
<b>Credit points / SWS:</b>	5 ECTS / 4 SWS		
<b>Workload:</b>	Contact hours:	47 h	
	Self-study:	78 h	
	Total workload:	125 h	
<b>Subjects of the module:</b>	Strategic Foresight and Trend Analysis		
<b>Lecture types:</b>	SU/Ü-Lecture with integrated exercises.		
<b>Examinations:</b>	mdIP – oral examination, 15-20 minutes		
<b>Usability for other study programs:</b>	Please see the subject recognition list of SCS (Study Service Centre)		
<b>Prerequisites according examination regulation:</b>			
None			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>The students:</p> <ul style="list-style-type: none"> <li>• understand the most important foresight methods and can distinguish and explain them;</li> <li>• can apply the methods learned in case studies;</li> <li>• can methodically analyse trends and derive future developments;</li> <li>• are aware of challenges in future thinking and can address these.</li> </ul>			
<b>Content:</b>			
<ul style="list-style-type: none"> <li>• Customer-, technology-, and competitor-foresight</li> <li>• Trend analysis and strategic early identification</li> <li>• Visioning</li> <li>• Strategic simulation methods</li> <li>• Prognostic crowdsourcing</li> <li>• Delphi method</li> <li>• Scenario technique</li> <li>• Trendreceiver method</li> <li>• Analysis of Science Fiction</li> </ul>

**Additional remarks:**

A voluntary bonus system is offered: In the course, topics on methods of technology management are offered for individual processing and presentation, which lead to bonus points for the examination performance for each qualitatively processed task. The creditability as well as maximum crediting of bonus points takes place according to the APO.

Lectures contain digital learning elements for self-study, such as learning videos or meetings via web conferences.

The examination can be held in digital form on a PC at the university campus.

**Additional remarks:**

A voluntary bonus system is offered: In the course, topics on methods of technology management are offered for individual processing and presentation, which lead to bonus points for the examination performance for each qualitatively processed task. The creditability as well as maximum crediting of bonus points takes place according to the APO.

Lectures contain digital learning elements for self-study, such as learning videos or meetings via web conferences.

The examination can be held in digital form on a PC at the university campus.

<b>Prerequisites according examination regulation:</b>			
None			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>The students</p> <ul style="list-style-type: none"> <li>• are familiar with entrepreneurship-related theories, models, and ideas, and can reflect on what entrepreneurship is and what it means to develop an entrepreneurial mindset and culture;</li> <li>• know and can discuss the relationship and meaning of technological, social and environmental trends and scenarios with regard to business model development and innovation as well as the meaning of sustainability in the context of business development and risk management;</li> <li>• are familiar with digital, sustainable, disruptive and forward-looking business models, can explain the special features of each and give examples of successful business models;</li> <li>• know concepts of organisational resilience and can explain and discuss resilience in the context of entrepreneurship, business success and business modelling;</li> <li>• know the entrepreneurship process, business modelling tools and key factors of successful business models;</li> <li>• are able to develop future oriented business models by using different tools and methods;</li> <li>• know the meaning of uncertainty for corporates and entrepreneurs and approaches and methods to deal with uncertainty in the business context;</li> <li>• know the requirements for risk management and the four phases of risk management;</li> </ul>			

- can apply selected risk management tools and methods in the context of future oriented business modelling and develop an enterprise risk management system;
- can evaluate business models qualitatively and quantitatively.

**Content:**

## General introduction

- Business Development, sustainability and future orientation of corporates

## Introduction into Entrepreneurship

- Development of entrepreneurship as a research discipline
- Types of entrepreneurships
- Entrepreneurial mindset and culture
- Entrepreneurship process
- Business opportunities

## Future oriented business modelling and business modelling tools

- Types of different business models (social, sustainable, digital, disruptive business models, business model patterns)
- Sources of business ideas, ideation, ideation tools
- Business modelling, business model innovation
- Business model evaluation
- Business planning
- Aspects of finance and accounting
- Risk management

## Business environment and business organization

- Economic systems
- Technical, social and environmental environment
- Traditional and alternative business forms

## Trends in Entrepreneurship

- Dealing with global challenges, megatrends, VUCA and uncertainty (design thinking, lean startup approach, effectuation)
- Data driven business models
- Disciplined entrepreneurship

<b>Prerequisites according examination regulation:</b>			
None			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>After attending the course, the students:</p> <ul style="list-style-type: none"> <li>• know basics of systems thinking and apply this knowledge on different levels (e.g., transformation of sociotechnical systems, organizations, or teams);</li> <li>• can recognize wicked problems and know how to manage them;</li> <li>• can define and explain the concept of sociotechnical systems and related transformation pathways;</li> <li>• know how to design transition processes for sociotechnical systems;</li> <li>• understand the principles and process of transformation and change processes within organizations;</li> <li>• know how to approach and orchestrate transformation processes from a managerial perspective;</li> <li>• understand and can critically reflect current trends in organizational design and related management approaches (e.g., organizational ambidexterity and objective and key results);</li> <li>• understand the psychological dynamics and cognitive biases in transformation processes;</li> <li>• understand the relevance of stakeholder inclusion and know how to leverage participatory methods to foster strategic decision-making that is inclusive and aligned with organizational change objectives;</li> <li>• can anticipate opportunities and risks of operational and social transformation processes;</li> <li>• know principles and practices of successful leadership in transformation processes.</li> </ul>			

**Content:**

The course is structured in two overarching blocks:

Block I: The transformation of socio-technical systems

- Wicked problems;
- Fundamentals of systems thinking (including workshop on agent-based models);
- Sociotechnical systems and their transition pathways;
- Transition Design

Block II: The transformation of organizations

- Enterprise Transformation Cycle;
- Stakeholder theory and participatory methods;
- Current trends in organizational design and how to implement them;
- Current trends in organizational leadership and how to implement them;
- Leadership in change and transformation processes;
- Dealing with conflicting goals and team dynamics during change processes.

<b>Prerequisites according examination regulation:</b>			
None			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>After attending the course, the students are able to:</p> <ul style="list-style-type: none"> <li>• define and explain the concept, principles, and process of technology assessment;</li> <li>• define and explain the concepts of business ethics and technology ethics;</li> <li>• compare and contrast different methods of technology assessment and evaluate their suitability for different purposes;</li> <li>• know how to incorporate ethical considerations and stakeholder perspectives into strategic decision-making processes;</li> <li>• apply methods of ethical technology foresight to evaluate societal and environmental risks and opportunities related to emerging technologies;</li> <li>• critically reflect on and discuss emerging technologies regarding uncertainties, ambiguities, cognitive biases, and controversies based on different schools of moral reasoning;</li> <li>• apply frameworks for responsible innovation to ensure the ethical development and application of new technologies;</li> <li>• define and explain the concept of corporate digital responsibility and understand related tasks from a managerial perspective;</li> <li>• understand the tasks and importance of compliance and integrity leadership to foster ethical behavior in organizations.</li> </ul>			

**Content:**

- Concept, history, and relevance of technology assessment
- Concept and relevance of business ethics and technology ethics
- Fundamental principles of technology assessment (e.g., precautionary principle)
- Qualitative, quantitative, and experimental designs for technology assessment
- Methods of ethical foresight for emerging technologies
- The relevance of unconscious biases and noise in the digital world
- Schools of moral reasoning: Universalism, utilitarianism, rights-based approaches, fairness approaches, virtue ethics
- Frameworks for ethical leadership, decision making and responsible innovation (e.g., the Ethical Cycle)
- Frameworks for corporate ethics and digital responsibility, as well as related compliance processes

The curriculum is supplemented by case studies and in-class debates on controversial emerging technologies (exemplary topics are cryptocurrency, biohacking, deep fakes, geo-engineering, and robot-human-interaction).

<b>Objectives:</b>			
<p>The students</p> <ul style="list-style-type: none"> <li>• can carry out trend analyses, identify business risks and opportunities, risk identification and assessment;</li> <li>• can set up and evaluate scenarios and business models in a complex case study by using theoretical knowledge (scenario technique, business modelling);</li> <li>• can qualitatively and quantitatively evaluate these different scenarios, risks, business opportunities and business models;</li> <li>• and, on this basis, make recommendations for strategic risk management and/or business model innovation;</li> <li>• improve their skills in working autonomously and developing solutions to individual complex problems from business environment;</li> <li>• can organise and structure themselves and their resources in a complex project.</li> <li>• improve their communication and presentation skills regarding different stakeholders (e.g., from science, economics, communities)</li> <li>• students learn to work in a team, to organise teamwork and to solve conflicts in the team</li> </ul>			

**Content:**

- Analysis of relevant technological, economic, social and environmental trends and specific challenges
- Scenario and business model development
- Risk identification, assessment and management through risk mitigation strategies, product/service and/or business model innovation
- Quantitative and qualitative evaluation of the results
- Enhancement of the learning process through practical experiences
- Presentation of the results

**Additional remarks:**

Recommended literature is analogue to the modules "Future Business Modeling" and "Strategic Foresight and Trend Analysis", additional literature is depending on the specific project and project partner and will be provided throughout the course

<b>Scientific Research Seminar</b>			
<b>Module abbreviation:</b>	SciResSem_M-GFT	<b>SPO-No.:</b>	10
<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Global Foresight and Technology Management (SPO WS 21/22)	Compulsory module	2
<b>Module attributes:</b>	<b>Language of instruction</b>	<b>Duration of module</b>	<b>Frequency of offer</b>
	English	1 semester	winter and summer term
<b>Responsible for module:</b>	Bechthold, Laura		
<b>Lecturers:</b>	Bechthold, Laura; Moser, Christina		
<b>Credit points / SWS:</b>	7 ECTS / 6 SWS		
<b>Workload:</b>	Contact hours:	70 h	
	Self-study:	105 h	
	Total workload:	175 h	
<b>Subjects of the module:</b>	Scientific Research Seminar		
<b>Lecture types:</b>	S-Seminar		
<b>Examinations:</b>	Project work with oral presentation (15 minutes) and written elaboration (5 - 25 pages)		
<b>Usability for other study programs:</b>	Please see the subject recognition list of SCS (Study Service Centre).		
<b>Prerequisites according examination regulation:</b>			
None			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>After attending the course, the students</p> <ul style="list-style-type: none"> <li>• can plan, implement and manage a research project, including the development of a research question and hypotheses;</li> <li>• can perform literature reviews and evaluate scientific articles;</li> <li>• understand different scientific research designs and can critically assess them;</li> <li>• understand correct ways to refer to and cite from scientific literature;</li> <li>• understand and apply selected qualitative research methods, specifically interview studies and qualitative content analysis;</li> <li>• understand and apply selected quantitative methods, specifically survey and experimental research, as well as related statistical analysis, and can apply them to data evaluation in research projects;</li> <li>• can analyse interdisciplinary problems, recognize correlations, transfer learned competences to new problems and evaluate developed solutions technically, economically and socially;</li> <li>• can present work results in a scientific presentation and scientific paper or poster;</li> <li>• have improved their skills in English writing for scientific purposes;</li> </ul>			

<ul style="list-style-type: none"> <li>• can work on complex tasks in cross-functional and international teams, solve conflicts in the team and take over team leadership.</li> <li>• can organise themselves and manage their time as well as work in a goal-oriented and independent manner</li> </ul>
<b>Content:</b>
<ul style="list-style-type: none"> <li>• Carrying out a complex interdisciplinary research project within small teams regarding technology development, economy, and society</li> <li>• Research design</li> <li>• Literature search and review</li> <li>• Scientific writing and scientific presentations</li> <li>• Critical scientific review</li> <li>• Data types and data collection techniques</li> <li>• Overview of best practices and current tools for conducting effective literature reviews (data bases, working with citation programs, literature mapping tools)</li> <li>• Quantitative and qualitative methods and data analyses</li> <li>• Research integrity</li> <li>• Autonomous processing applying scientific methods and acquired skills</li> </ul> <p>Discussion, presentation, and documentation of the project results according to scientific standards</p>

**Additional remarks:**

The student is independently responsible for finding the topic and the supervision by a professor of the Faculty of Engineering and Management.

According to the APO, the master's thesis can be written in German or English language.
